Eye Tracking: A comprehensive guide to methods and measures Kenneth Holmqvist, Marcus Nyström, Richard Andersson, Richard Dewhurst, Halszka Jarodzka, Joost van de Weijer

We make 3-5 eye movements per second, and these movements are crucial in helping us deal with the vast amounts of information we encounter in our everyday lives. In recent years, thanks to the development of eye tracking technology, there has been a growing interest in monitoring and measuring these movements, with a view to understanding how we attend to and process the visual information we encounter

Eye tracking as a research tool is now more accessible than ever, and is growing in popularity amongst researchers from a whole host of different disciplines. Usability analysts, sports scientists, cognitive psychologists, reading researchers, psycholinguists, neurophysiologists, electrical engineers, and others, all have a vested interest in eye tracking for different reasons. The ability to record eye-movements has helped advance our science and led to technological innovations. However, the growth of eye tracking in recent years has also presented a variety of challenges - in particular the issue of how to design an eye-tracking experiment, and how to analyse the data.

This book is a much needed comprehensive handbook of eye tracking methodology. It describes how to evaluate and acquire an eye-tracker, how to plan and design an eye tracking study, and how to record and analyse eye-movement data. Besides technical details and theory, the heart of this book revolves around practicality - how raw data samples are converted into fixations and saccades using event detection algorithms, how the different representations of eye movement data are calculated using AOIs, heat maps and scanpaths, and how all the measures of eye movements relate to these processes.

Part I presents the technology and skills needed to perform high-quality research with eye-trackers.

Part II covers the predominant methods applied to the data which eye-trackers record. These include the parsing of raw sample data into oculomotor events, and how to calculate other representations of eye movements such as heat maps and transition matrices.

Part III gives a comprehensive outline of the measures which can be calculated using the events and representations described

in Part II. This is a taxonomy of the measures available to eye-tracking researchers, sorted by type of movement of the eyes and type of analysis.

For anyone in the sciences considering conducting research involving eye-tracking, this book will be an essential reference work.

From reader reviews:

Tara Thornton:

As people who live in the particular modest era should be change about what going on or details even knowledge to make these individuals keep up with the era which is always change and progress. Some of you maybe will update themselves by reading through books. It is a good choice to suit your needs but the problems coming to an individual is you don't know what kind you should start with. This Eye Tracking: A comprehensive guide to methods and measures is our recommendation to help you keep up with the world. Why, as this book serves what you want and need in this era.

Teresa Vanhook:

This book untitled Eye Tracking: A comprehensive guide to methods and measures to be one of several books this best seller in this year, this is because when you read this book you can get a lot of benefit on it. You will easily to buy this specific book in the book retail store or you can order it by way of online. The publisher in this book sells the e-book too. It makes you quicker to read this book, since you can read this book in your Cell phone. So there is no reason to your account to past this e-book from your list.

Shawn McDonald:

People live in this new day of lifestyle always attempt to and must have the spare time or they will get great deal of stress from both way of life and work. So , if we ask do people have time, we will say absolutely indeed. People is human not really a huge robot. Then we question again, what kind of activity do you have when the spare time coming to an individual of course your answer will certainly unlimited right. Then do you ever try this one, reading publications. It can be your alternative with spending your spare time, the actual book you have read is actually Eye Tracking: A comprehensive guide to methods and measures.

Monique Hightower:

In this period globalization it is important to someone to find information. The information will make someone to understand the condition of the world. The condition of the world makes the information better to share. You can find a lot of sources to get information example: internet, newspaper, book, and soon. You can observe that now, a lot of publisher that will print many kinds of book. The particular book that recommended for you is Eye Tracking: A comprehensive guide to methods and measures this reserve consist a lot of the information in the condition of this world now. This book was represented how can the world has grown up. The language styles that writer value to explain it is easy to understand. The actual writer made some study when he makes this book. Honestly, that is why this book ideal all of you.
