**Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology** Michael Keidar, Isak Beilis

Plasma engineering applies the unique properties of plasmas (ionized gases) to improve processes and performance over many fields, such as materials processing, spacecraft propulsion, and nanofabrication. *Plasma Engineering* considers this rapidly expanding discipline from a unified standpoint, addressing fundamentals of physics and modeling as well as new real-world applications in aerospace, nanotechnology, and bioengineering.

The book starts by reviewing plasma particle collisions, waves, and instabilities, and proceeds to diagnostic tools, such as planar, spherical, and emissive probes, and the electrostatic analyzer, interferometric technique, and plasma spectroscopy. The physics of different types of electrical discharges are considered, including the classical Townsend mechanism of gas electrical breakdown and the Paschen law. Basic approaches and theoretical methodologies for plasma modeling are described, based on the fluid description of plasma solving numerically magnetohydrodynamic (MHD) equations and the kinetic model particle techniques that take into account kinetic interactions among particles and electromagnetic fields.

Readers are then introduced to the widest variety of applications in any text on the market. Space propulsion applications such as the Hall thruster, pulsed plasma thrusters, and microthruster are explained. Application of low-temperature plasmas in nanoscience and nanotechnology, another frontier in plasma physics, is covered, including plasma-based techniques for carbon-based nanoparticle synthesis (e.g., fundamental building blocks like single-walled carbon nanotubes and graphene). Plasma medicine, an emerging field studying plasmas for therapeutic applications, is examined as well. The latest original results on cold atmospheric plasma (CAP) applications in medicine are presented, with a focus on the therapeutic potential of CAP with a in selective tumor cell eradication and signaling pathway deregulation.

- The first textbook that addresses plasma engineering in the aerospace, nanotechnology, and bioengineering fields from a unified standpoint
- Includes a large number of worked examples, end of chapter exercises, and historical perspectives
- Accompanying plasma simulation software covering the Particle in Cell (PIC) approach, available at <http://www.particleincell.com/blog/2011/particle-in-cell-example/>

### **From reader reviews:**

#### **Terry White:**

Here thing why this specific Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology are different and reliable to be yours. First of all examining a book is good however it depends in the content of it which is the content is as tasty as food or not. Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology giving you information deeper since different ways, you can find any e-book out there but there is no e-book that similar with Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology. It gives you thrill studying journey, its open up your eyes about the thing that happened in the world which is probably can be happened around you. You can actually bring everywhere like in park your car, café, or even in your technique home by train. Should you be having difficulties in bringing the imprinted book maybe the form of Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology in e-book can be your option.

#### **Jack Johnson:**

Do you certainly one of people who can't read gratifying if the sentence chained in the straightway, hold on guys this particular aren't like that. This Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology book is readable by simply you who hate those straight word style. You will find the info here are arrange for enjoyable studying experience without leaving actually decrease the knowledge that want to offer to you. The writer of Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology content conveys the idea easily to understand by many people. The printed and e-book are not different in the content but it just different available as it. So , do you continue to thinking Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology is not loveable to be your top record reading book?

#### **Angel Sutton:**

Typically the book Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology will bring you to the new experience of reading the book. The author style to spell out the idea is very unique. Should you try to find new book to learn, this book very ideal to you. The book Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology is much recommended to you you just read. You can also get the e-book in the official web site, so you can more readily to read the book.

#### **Joyce Hazel:**

Don't be worry when you are afraid that this book will probably filled the space in your house, you could have it in e-book way, more simple and reachable. This specific Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology can give you a lot of good friends because by you looking at this one book you have factor that they don't and make anyone more like an interesting person. This particular book can be one of one step for you to get success. This guide offer you information that perhaps your friend

doesn't realize, by knowing more than other make you to be great people. So , why hesitate? Let us have Plasma Engineering: Applications from Aerospace to Bio and Nanotechnology.
