Percolation Theory for Flow in Porous Media (Lecture Notes in Physics)

Allen Hunt, Robert Ewing

Percolation Theory for Flow in Porous Media (Lecture Notes in Physics) Allen Hunt, Robert Ewing

This monograph presents, for the first time, a unified and comprehensive introduction to some of the basic transport properties of porous media, such as electrical and hydraulic conductivity, air permeability and diffusion. The treatment is based on critical path analysis and the scaling of transport properties which are individually described as functions of saturation. At the same time, the book supplies a tutorial on percolation theory for hydrologists, providing them with the tools for solving actual problems. In turn, a separate chapter serves to introduce physicists to some of the language and complications of groundwater hydrology necessary for successful modelling. End of chapter problems often indicate open questions, on which young researchers entering the field can readily start work.

This significantly revised and much expanded edition was made necessary by both the selling out of the first edition and the rapid progress in the field. At the same time the tutorial aspects of the first few chapters have been considerably improved and the number of models, experiments and range of medium properties considered have been increased. Topics discussed for the first time in detail in this edition are advanced topological aspects of percolation theory that serve as a basis for examining dispersion aspects in porous media.

"The book is suitable for advanced graduate courses, with selected problems and questions appearing at the end of each chapters. [...] I think the book is an important work that will guide soil scientists, hydrologists, and physicists to gain a better qualitative and quantitative understanding of multitransport properties of soils." (Marcel G. Schaap, Soil Science Society of America Journal, May-June, 2006)

From reader reviews:

Amelia Brown:

This Percolation Theory for Flow in Porous Media (Lecture Notes in Physics) book is not ordinary book, you have it then the world is in your hands. The benefit you obtain by reading this book is definitely information inside this guide incredible fresh, you will get details which is getting deeper you read a lot of information you will get. This specific Percolation Theory for Flow in Porous Media (Lecture Notes in Physics) without we realize teach the one who reading it become critical in pondering and analyzing. Don't end up being worry Percolation Theory for Flow in Porous Media (Lecture Notes in Physics) can bring if you are and not make your case space or bookshelves' grow to be full because you can have it in the lovely laptop even cell phone. This Percolation Theory for Flow in Porous Media (Lecture Notes in Physics) having very good arrangement in word and also layout, so you will not feel uninterested in reading.

Arthur Daniel:

A lot of people always spent all their free time to vacation or go to the outside with them family or their friend. Were you aware? Many a lot of people spent that they free time just watching TV, or even playing video games all day long. If you wish to try to find a new activity here is look different you can read any book. It is really fun in your case. If you enjoy the book that you simply read you can spent 24 hours a day to reading a book. The book Percolation Theory for Flow in Porous Media (Lecture Notes in Physics) it is rather good to read. There are a lot of those who recommended this book. These folks were enjoying reading this book. In the event you did not have enough space bringing this book you can buy often the e-book. You can m0ore simply to read this book from the smart phone. The price is not too costly but this book offers high quality.

Samuel Ware:

People live in this new morning of lifestyle always aim to and must have the extra time or they will get great deal of stress from both daily life and work. So , when we ask do people have spare time, we will say absolutely indeed. People is human not just a robot. Then we ask again, what kind of activity have you got when the spare time coming to you of course your answer will certainly unlimited right. Then ever try this one, reading textbooks. It can be your alternative throughout spending your spare time, the particular book you have read will be Percolation Theory for Flow in Porous Media (Lecture Notes in Physics).

Mary Barnett:

That book can make you to feel relax. This book Percolation Theory for Flow in Porous Media (Lecture Notes in Physics) was colourful and of course has pictures on the website. As we know that book Percolation Theory for Flow in Porous Media (Lecture Notes in Physics) has many kinds or variety. Start from kids until teens. For example Naruto or Detective Conan you can read and believe you are the character on there. So , not at all of book are usually make you bored, any it offers you feel happy, fun and relax. Try to choose the

best book to suit your needs and try to like reading that will.
